

# IDQ across-session summary, n=7 sessions

Created: 22-Jun-2026 18:05:49  
7 Session, 6119 Trials: (4347 with noise)

Mean performance: 0.725  
Mean noisy-step performance: 0.700  
Mean noisy step coh: 36.4  
Rect summed-noise mean (SD): -0.104 (10.2)

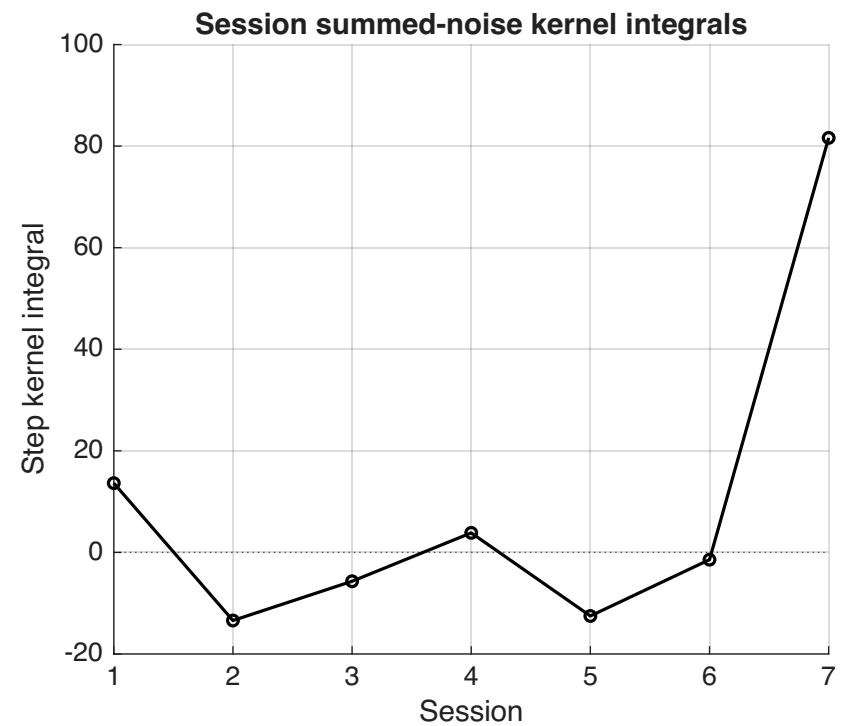

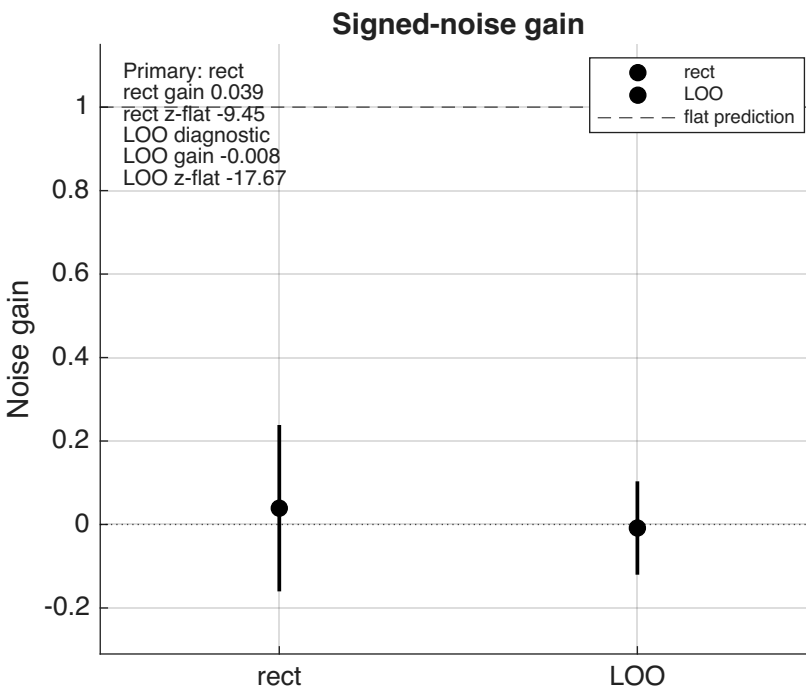

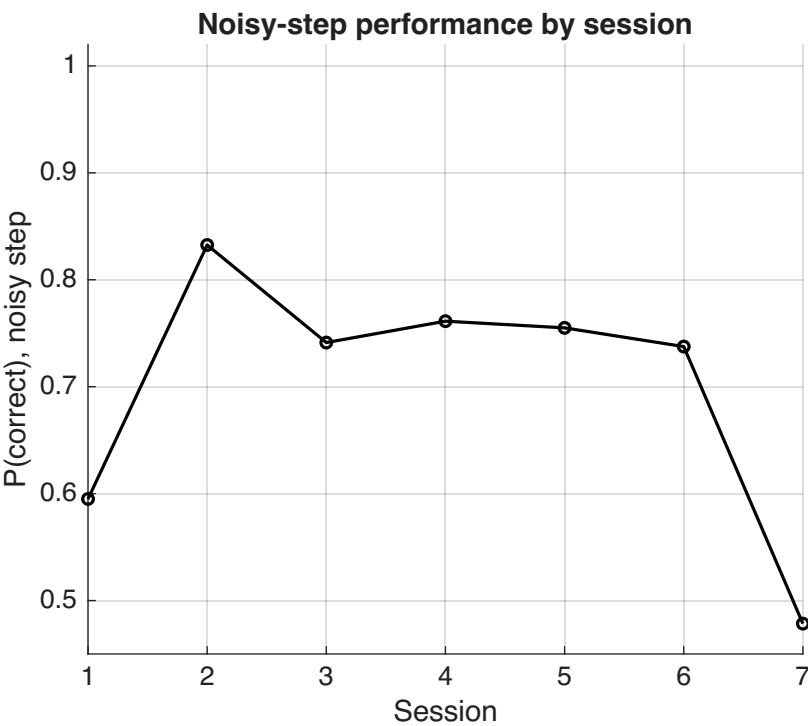

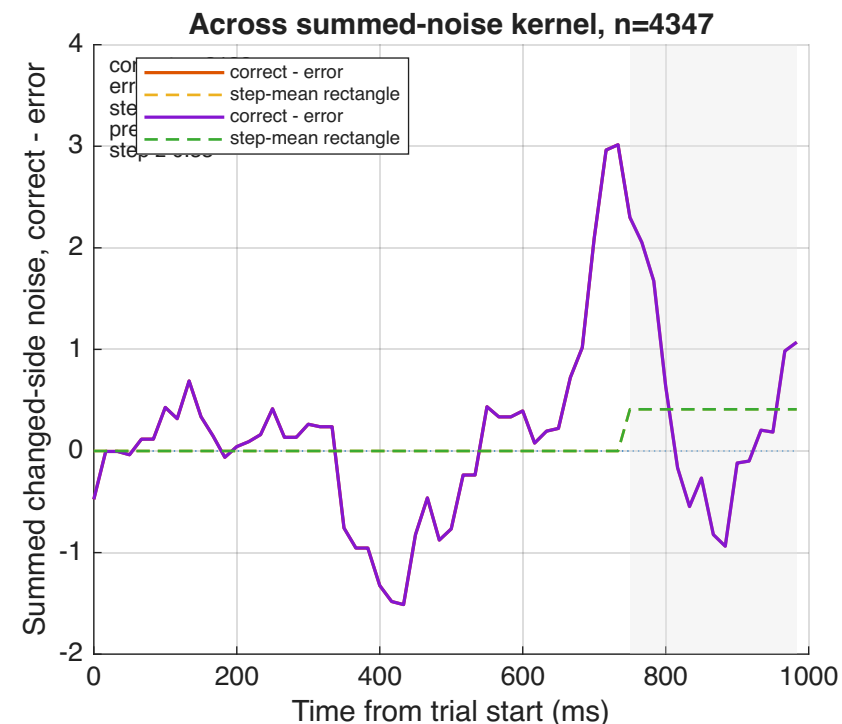

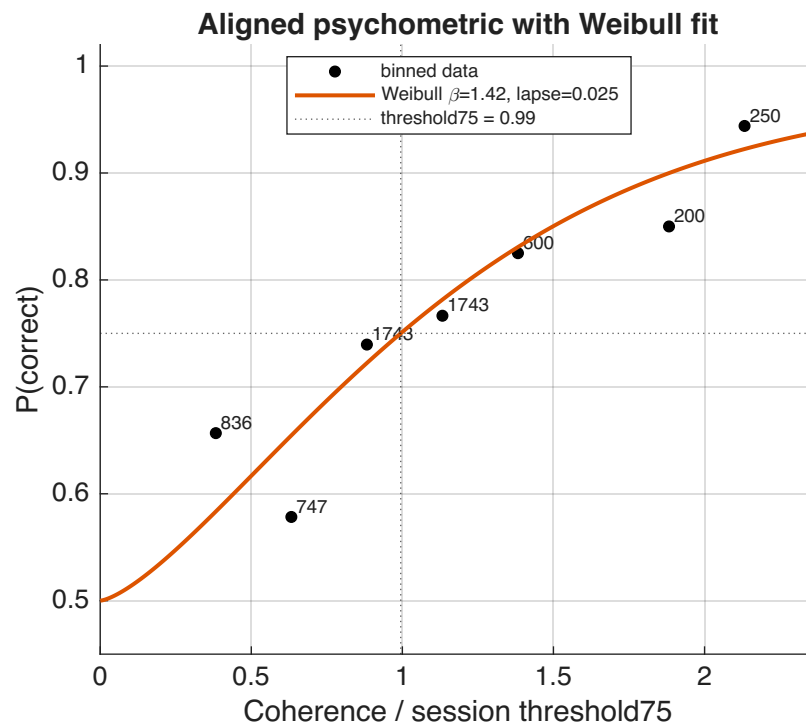

Across kernel step integral: 6.15, mean: 0.41

Pass1 beta/lapse: 1.547 / 0.025  
Pass2 beta/lapse: 1.417 / 0.025  
Pass2 Weibull threshold75: 0.994

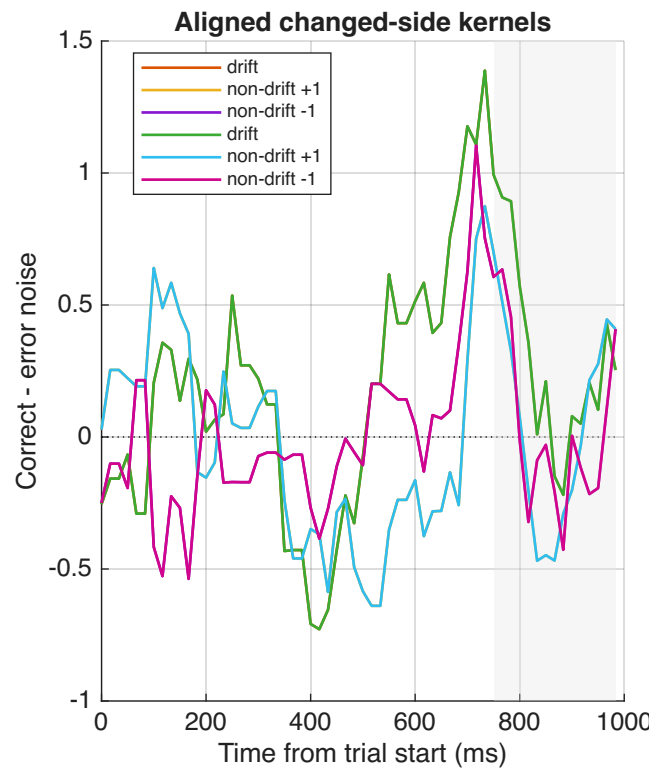

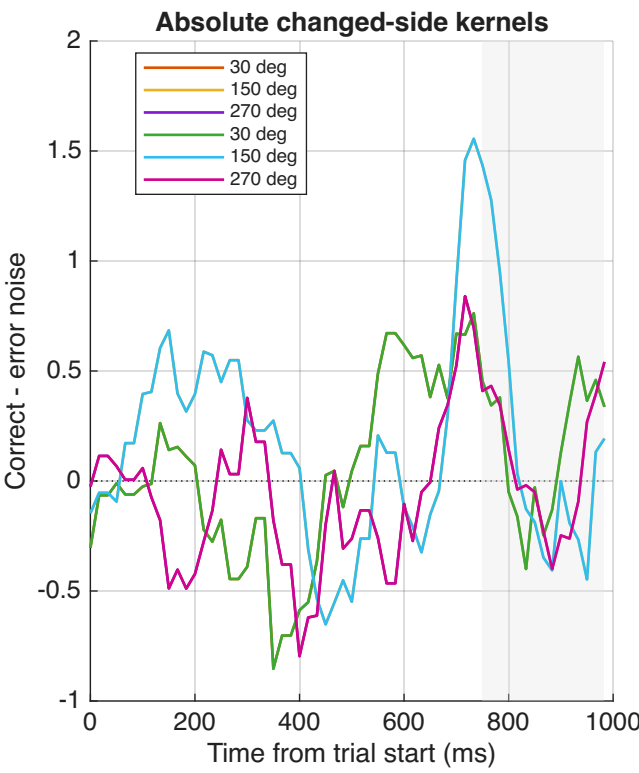

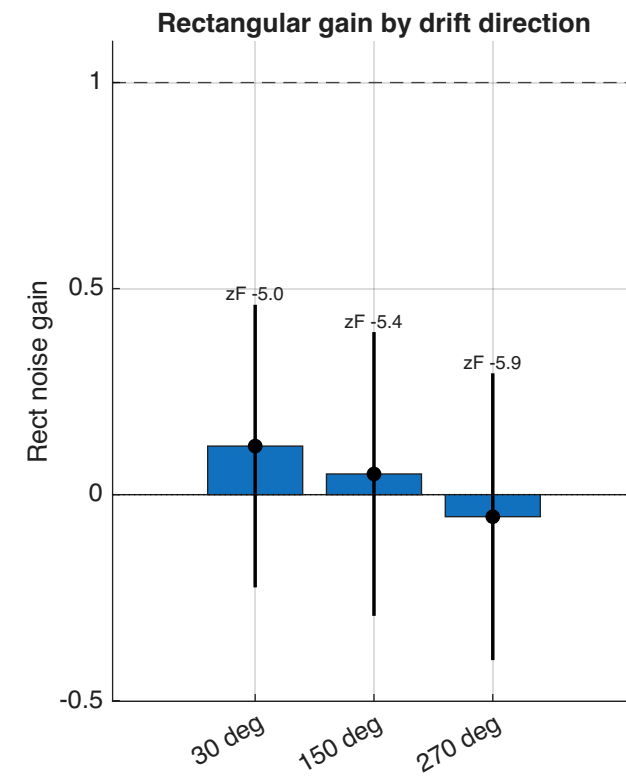

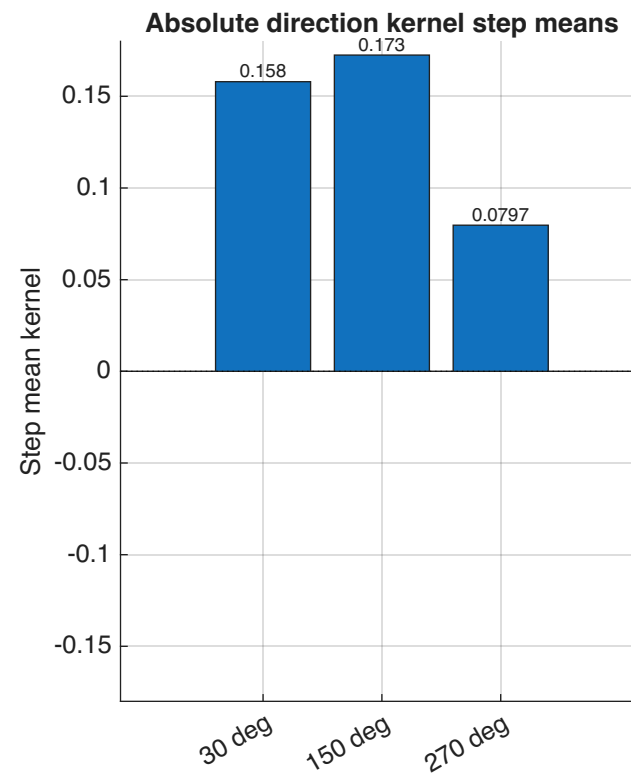

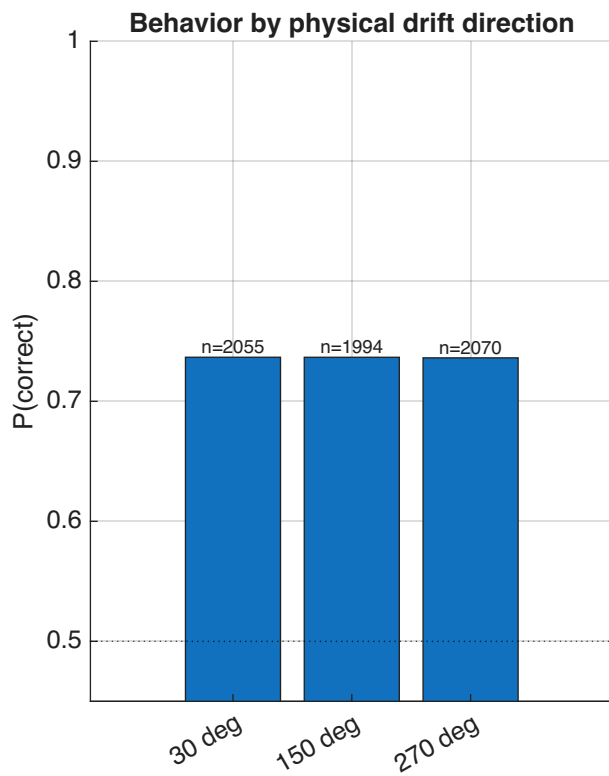

Rect noise gain: 0.039; 95% CI: [-0.160 0.238]  
Flat prediction: 1.0  
z vs flat: -9.45

Across kernel step mean: 0.41  
Across kernel pre SD: 0.912  
Across kernel step z: 0.33

L00 min effective frames: 0.88  
L00 max frac neg weights: 0.53

# IDQ direction diagnostics

## Direction diagnostics

Behavior is grouped by physical drift direction.  
Aligned kernels are grouped by stream relative to drift.

Best physical direction: 30 deg,  $p=0.737$   
Worst physical direction: 270 deg,  $p=0.736$   
Behavior range: 0.001

## Absolute kernel step means:

30 deg: 0.158  
150 deg: 0.173  
270 deg: 0.0797

## Aligned kernel step means:

drift: 0.313  
non-drift +1: 0.0563  
non-drift -1: 0.0406

Diagnostic only; primary gain remains collapsed across directions.
