DOG coarse screen (rectified MT templates): selection uses IDR gCQ only

Best model
center sigma: 5 deg
surround sigma: NaN deg
surround magnitude: 0
gCQ criterion: 113.032
baseline criterion: 113.032
Delta baseline-best: 0.000

Best DOG (rectified MT templates): fitted target and held-out IDR gains
Change preferred
Change probe (fit target)
No-change preferred (held out)
No-change probe (held out)
Gain
Probe offset (deg)
Gaussian baseline
Best DOG
